Renovations & New Construction

Field Top Maker -

The Top Maker is ideally suited for the removal of unwanted grasses and weeds such as Poa Annua. Surface renovation is simplified and baseball field lip repair/maintenance is made easy. Top making removes the top layer and allows thick depth removal (up to 2") of root mass without disturbing the grade. If re-installed with thick cut sod, it can handle play on the surface the next day.

Bleccavator -

The Bleccavator is the ideal machine for prepping areas quickly and economically. In one pass, the Bleccavator levels, rakes and cultivates to a depth of up to 8". It pulverizes the soil and buries rock, overgrowth and debris. It finishes with a firm surface ready to work with. Bleccavators are used extensively on applications where quality and reliability is top priority.

Laser Grading -

Areas can be easily graded to the design specifications while creating smoother playing surfaces. On renovation projects, laser grading can return fields and surfaces quickly to top playing conditions. Laser leveling eliminates uneven playing surfaces and eliminates standing water through improved surface drainage.

Aerification -

When compacted soils are mechanically broken apart, plants grow stronger, healthier root systems and result in fewer compaction related turf issues. Other benefits of frequent aerification include: enhanced soil water retention and percolation, quicker recovery from turfgrass injury, improved response to fertilizers and soil prep for overseeding.

Top Dressing -

Topdressing is the preferred method of maintaining smooth, firm golf greens and athletic field surfaces disrupted by play. It levels out uneven terrain and low spots to provide a smoother and faster playing surface. In addition to providing a more efficient use of water resources, it helps eliminate thatch and creates better turf density and color.

Overseeding -

Overseeding can renovate a worn or damaged area and increase turfgrass density. It can be accomplished on a variety of surfaces including irrigated or dry land areas. The options include custom field blends or native seeding to your specifications.

Proud Sod Providers for:

Adam's Mountain Country Club
Denver Broncos.....Invesco Field
Colorado Rockies.....Coors Field
CU Buffaloes.....Folsom Field
KC Royals.....Kauffman Stadium
St. Louis Cardinals...Busch Stadium
Colorado Rapids....Dick's Sporting
Goods Park
Chicago Cubs.....Wrigley Field
